I am an XM Radio subscriber who is very satisfied with the current programming, including that for traffic and weather. I understand that the National Association of Broadcasters is questioning the right of XM Radio to use current traffic and weather report information on its system. I would encourage the FCC to be mindful of the opportunities that exist in satellite radios, not the least of which is my ability to get traffic information in my car when I want it, not on a schedule set by the radio station. So, I respectfully request that the FCC reject NAB's petition 04-160. Thank you for your consideration of this matter.
